

Product Information Technoline Mini

A clear decision

Sparkling, refreshing and healthy: Due to the high concentration of minerals and trace elements in the sea water, a bath in the sea is vitalising, soothing and relaxing. Enjoy the quality of life and joie de vivre every day with the swimming pool system "SALT WATER LIGHT®". The low salt concentration makes the water pleasant and fresh. There is no need for conventional chlorination with commercial chemicals.

Technopool systems have proven their value for many years in private homes, hotels, therapeutic and exercise pools, as well as municipal and commercial pools, both indoors and outdoors.

Independent and user-friendly

Chlorine electrolysis systems in inline operation use salt for disinfection. Different types of salt may be used: sea salt, rock salt, brine etc. A low salt content of just 0.4 % is sufficient to produce enough hypochlorous acid to reliably disinfect swimming pool water.

The Technoline system can be operated independently from the filter system. The generation of hypochlorous acid takes place in a monopolar electrolytic cell installed in a bypass of the clean water pipe.

Safe and reliable

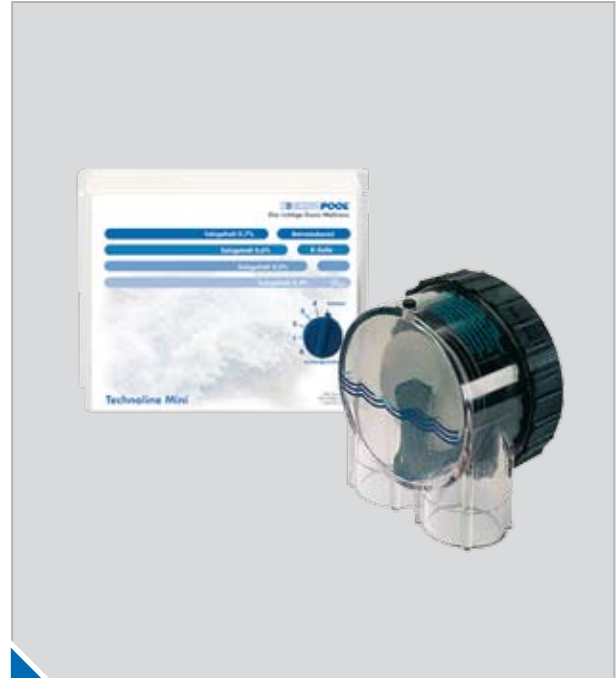

The Technoline Mini can be easily operated and is reliable. The current output of the control unit is adjustable in order to adapt the disinfection capacity of the Technoline Mini if there are weather changes or if dirt is carried into the swimming pool water.

The maintenance effort for the Technoline Mini is very low. The Technoline cell in handy CD-format allows for economical replacement of the anode without the need to replace the whole cell.

The Technoline Mini disinfects the swimming pool water in a safe, economical and environmentally friendly way. Chlorine chemicals in conventional pool systems are not only a cost factor. An improper use of chemicals may also lead to environmental damage or accidents. Such costs and risks are avoided by using the Technopool-system.

In short

- Swimming pool water that is gentle to the skin
- No reddened eyes, no irritation of the mucosa
- No typical chlorine smell in the swimming pool
- No chlorine chemicals
- Salt for disinfection
- Simple wall mounting
- Disinfection capacity adjustable
- Low maintenance effort
- Safe, economical and environmentally friendly

Description	Order no.
Technoline Mini for pool volumes up to 30 m ³	91120000
Spare cell (without acrylic glass housing)	91920000
Acrylic glass housing	91920008

Product Information Technoline Mini

Technical data

Control unit

	Technoline Mini
Dimensions (W x H x D)	230 x 180 x 65 mm
Weight (without connecting pipe)	1.5 kg
Power supply cable	1 m with safety plug
Power supply	230 V AC
Power control	4 settings
Output electrolytic cell	4...7.5 VDC
Current output electrolytic cell	8 A DC

Electrolytic cell

	Technoline Mini
Disinfection capacity	0...8 g chlorine equivalent
Maximum pool size	30 m ³
Temperature of the swimming pool water	15...35 °C
Dimensions (Ø x depth)	Ø 150 x 105 mm
Weight (without connecting pipe)	approx. 0.7 kg
Power supply cable	approx. 1.5 m
Nominal width	DN40 / D 50
Salt content	0,4...0,7 %
